PART 1 – INSTRUCTIONS TO PROPOSERS AND PROPOSAL CONDITIONS

1.1. About IUCN
IUCN is a membership Union uniquely composed of both government and civil society organisations. It provides public, private and non-governmental organisations with the knowledge and tools that enable human progress, economic development and nature conservation to take place together.

Headquartered in Switzerland, IUCN Secretariat comprises around 950 staff in more than 50 countries.

Created in 1948, IUCN is now the world’s largest and most diverse environmental network, harnessing the knowledge, resources and reach of more than 1,300 Member organisations and some 10,000 experts. It is a leading provider of conservation data, assessments and analysis. Its broad membership enables IUCN to fill the role of incubator and trusted repository of best practices, tools and international standards.

IUCN provides a neutral space in which diverse stakeholders including governments, NGOs, scientists, businesses, local communities, indigenous peoples organisations and others can work together to forge and implement solutions to environmental challenges and achieve sustainable development.

Working with many partners and supporters, IUCN implements a large and diverse portfolio of conservation projects worldwide. Combining the latest science with the traditional knowledge of local communities, these projects work to reverse habitat loss, restore ecosystems and improve people’s well-being.

PART 2 – THE REQUIREMENT (Terms of Reference)

Overview

The International Union for Conservation of Nature (IUCN) Science and Knowledge Unit seeks a qualified Firm/Consultant to undertake design and development of corporate end-user engagement and reporting materials to support pilot testing of a new metric, the Species Threat Abatement and Restoration (STAR) metric, that seeks to provide quantifiable information on the contribution that threat abatement and restoration of specific threats in specific places can make to the improvement of species survival probability.

The final outputs of this assignment will be:

1. An industry briefing note on STAR.
2. Slide decks and other relevant materials for webinars on STAR.
4. A short electronic (pdf) STAR reporting template for end users who have used STAR.

Background

Conservation of threatened biodiversity is often limited by a lack of readily available information: information on where threatened species are found; the types of threats facing individual species and their significance; and the impacts that different actions and investments can make on conservation outcomes. Moreover, as funding is limited and biodiversity conservation often competes with other land use objectives, conservation actions and investments typically must be weighed against alternative options. To date, these conservation and investment decisions have been made in absence of a quantitative, comparable, scalable, and verifiable measure of the conservation gains from alternative actions.

In response to this need, a new metric and approach is being developed, called the Species Threat Abatement and Restoration (STAR) metric. It relies on data from the IUCN Red List of Threatened Species to generate both ex-ante (potential) and ex-post (achieved) estimates on the impact of actions and investments to reducing threats to species loss at a range of scales and over a range of timelines.

The methodology for STAR, is under review at a scientific journal and will be shared with the identified Firm/Consultant along with relevant background and preliminary communications materials. The STAR metric as an estimated ex-ante calculation is based only on existing published information. This enables users to gain a preliminary evaluation of the potential of a site to contribute to threatened species conservation. The analysis is automated and therefore rapid, and provides an estimate of the species present at the site, the estimated/suspected/inferred proportion of each of the species current habitat that the site represents, the known threats affecting those species that may be operating at the site, and the proportion of those species historical habitat that has been converted and therefore could be restored at the site. The ability to calculate STAR scores using globally available data is what gives STAR its strong policy context, as the estimated ex ante score provides a preliminary indication of the relative contribution that a site could make to global species conservation. The analysis can also be used – with limitations borne in mind – to compare estimated scores between sites.

This Consultancy is supporting the development of end-user engagement and reporting materials targeted at corporates applying STAR.

Duties and Responsibilities

The selected Firm/Consultant will be responsible for delivering the following work:
• An industry briefing note on STAR to outline the various use-cases of STAR for business.
• Slide decks and other relevant materials for webinars on STAR. These will be based on the briefing note and targeted at corporates for a 30 minute webinar with additional time for Q&A. Preparation of content and materials, and interaction with IUCN to refine and agree on drafts.
• A guidance document user manual for corporates. A corporate-facing guide on using STAR to assess and interpret your corporate biodiversity footprint, including instructions for using the global STAR layers to get a first sense of your footprint, how to incorporate site-specific data, and interpretation of information and limitations. The user manual will require iteration with IUCN.
• A short electronic (pdf) STAR reporting template for end users who have used STAR. Likely it will contain a set of core visualizations and additional optional fields and graphics to reflect the uniqueness of each case. The reporting template will need iteration with IUCN.

Timeline for Deliverables
