PART 1 – INSTRUCTIONS TO PROPOSERS AND PROPOSAL CONDITIONS

1.1. About IUCN

IUCN is a membership Union uniquely composed of both government and civil society organisations. It provides public, private and non-governmental organisations with the knowledge and tools that enable human progress, economic development and nature conservation to take place together.

Headquartered in Switzerland, IUCN Secretariat comprises around 950 staff in more than 50 countries.

Created in 1948, IUCN is now the world's largest and most diverse environmental network, harnessing the knowledge, resources and reach of more than 1,300 Member organisations and some 15,000 experts. It is a leading provider of conservation data, assessments and analysis. Its broad membership enables IUCN to fill the role of incubator and trusted repository of best practices, tools and international standards.

IUCN provides a neutral space in which diverse stakeholders including governments, NGOs, scientists, businesses, local communities, indigenous peoples organisations and others can work together to forge and implement solutions to environmental challenges and achieve sustainable development.

Working with many partners and supporters, IUCN implements a large and diverse portfolio of conservation projects worldwide. Combining the latest science with the traditional knowledge of local communities, these projects work to reverse habitat loss, restore ecosystems and improve people's well-being.

PART 2 – THE REQUIREMENT

Background information

Climate change is increasing the frequency, intensity and magnitude of disasters, leading to a higher number of casualties as well as property and economic losses. Nature can provide cost-effective, no-regret solutions, which help increase community resilience beyond their capacity to absorb and recover from a single disaster, such as a flood or drought. The Western Balkan economies are among the most vulnerable with respect to climate change impacts affecting numerous sectors and domains. Yet, the value derived from deploying Nature-based Solutions in response to societal challenges remains underexplored and the application of approaches that integrate natural infrastructure remain insufficient and fragmented, not least due to gaps in knowledge and capacities. Beyond the positive impact on societies and improved management of disaster risks, Nature-based Solutions benefit habitats and biodiversity as well as support climate change mitigation and adaptation.

Initial consultations with stakeholders have shown that Nature-based Solutions have been acknowledged as a valuable approach in the context of disaster risk reduction and climate change adaptation. However, capacities and skills on the concept and its application remain low. Additionally, there has been little or no consideration as to the implications for vulnerable groups, the role of men and women in adapting to and preventing disaster risks. Reactionary responses to disasters have been prevalent in comparison to longer-term planning. With an increase of the frequency of extreme events as well as the approximation to international agreements and EU acquis, Western Balkan economies are working towards comprehensive adaptation and disaster risk management plans and strategies.

ADAPT: Nature-based Solutions for resilient societies in the Western Balkans is a project funded by the Swedish International Development Cooperation Agency (Sida) and implemented by IUCN. It aims to increase ecosystem and community resilience to climate change and environmental degradation in the Western Balkans. This regional umbrella initiative works with the six Western Balkan economies, regional and local partners.

The project will be implemented through the following three objectives:

1. Increasing the knowledge and awareness of nature-based disaster risk reduction solutions among decision makers, natural resource managers and local communities;
2. Integration of Nature-based Solutions and equitable climate-smart planning into adaptation and disaster reduction policy; and on
3. Implementation of Nature-based Solutions for disaster risk reduction and their scale-up.

The consultants will build on existing research already done as part of ADAPT: scoping studies and comparative climate policy analysis. The objectives of the scoping studies were to understand the national context in terms of policy and legal framework for the application of NbS, they provided an overview of the most common natural hazards and disasters, elaborated on the added benefits of deploying NbS. They also identified knowledge, institutional and capacity gaps and barriers for the application of NbS, and provided recommendations and entry points for mainstreaming NbS into national disaster risk reduction and climate change policies and strategies.

Similarly, the comparative policy analysis contributes to ADAPT by analysing policies relevant for climate change adaptation, disaster risk reduction and biodiversity. The overall objectives of the regional comparative policy analysis are to analyse these policies in each of the Western Balkan economies against NbS principles and approaches, as embodied in the IUCN Global Standard for Nature-based Solutions criteria.

The Nature-based Solutions trainings will contribute directly to objective 1 and thus support increasing the knowledge and skills of decision makers, planners and practitioners on the role of Nature-based Solutions for climate change adaptation and disaster risk reduction. Particular emphasis will be put on the social benefits of

Nature-based Solutions, including community resilience, gender equality and more active participation of vulnerable groups. Indirectly the trainings will contribute also to increase NbS policy up-take since well trained and confident government officials will be able to advocate within their ministries for future NbS mainstreaming, budget allocations and deployment of NbS solutions on the ground.

Three training modules will be developed, which feed into the multiple levels at which the project engages. It involves government agencies, research institutions and civil society, which offers opportunities for knowledge exchange, wider capacity building and institutional strengthening as well as the potential for scaling up. Efforts will be made to revise all relevant training programmes, first those produced by IUCN and the Project Management Team will facilitate access to all necessary information. Secondly, those produced by other relevant stakeholders such as the [PEDRR Training Course on Ecosystem-based Disaster Risk Reduction for Sustainable Development](#). The consultant will also make efforts towards integrating training modules into existing capacity building or future educational programmes.

The three training modules will run for three days each and cover the following topics:

- Policy and decision-making focussing on the foundations of Nature-based Solutions for policymaking and planning,
- Practice and implementation considering how to properly design, assess, monitor and scale up appropriate interventions, and
- Practical innovation, which will be organised as a field course building on the experiences from the two ADAPT pilot sites.

Scope of work

Building on the PEDRR training programme, IUCN seeks to engage two consultants (one international and one from the Western Balkan region) to produce three new tailored training modules on Nature-based Solutions for decision makers, local authorities and managers. The training modules will address challenges and opportunities in the Western Balkans and where appropriate discuss national interests and concerns. Based on the existing background note providing a general overview of the three training modules as well as the research already undertaken in the ADAPT project, the consultants will identify specific training needs, design and develop the content and training materials for the three modules tailoring it to the context of the Western Balkans as well as the particular audience and subsequently conduct trainings (3 modules x 3 days x 2 times).

Specific tasks

The international NbS trainer will be responsible for leading and coordinating the development and implementation of NbS training modules in collaboration with the local NbS trainer, who will support the international NbS trainer to ensure that training modules are tailored to the needs of the region and stakeholders concerned. Please refer to the ToR of the local NbS trainer to better understand the relationship between these two consultancies.

In consultation with IUCN, national partners and other stakeholders, the international NbS trainer will:

- i. Compile information on and review existing NbS related training/workshop concepts, materials and information (globally, within IUCN and regionally) to create complementarity and fill specific capacity gaps relevant for the Western Balkan region; IUCN has already done work in this field through the Network Nature project. The consultants will be asked to take that as a starting point and continue building on that knowledge.
- ii. Prepare a detailed outline for each of the three modules, specifying resources and pedagogical methods, learning goals, strategies and interactive approaches used to convey information, enhance

- knowledge acquisition and mutual learning between actors from different local contexts as well as the expected outcomes;
- iii. Prepare training materials, including presentations, worksheets, background reading, training agenda and invitation for participants, etc. as well as a training manual providing instructions for facilitators
 - iv. Prepare a training booklet, one for each module, for training participants, leading them through all training components and providing them with additional resources where appropriate;
 - v. Perform the above-mentioned trainings together with the local trainer in each of the Western Balkan economies, six training workshops of three days each (2 per module)
 - vi. Prepare a report after each training.

Expected deliverables and tentative timeframe

The international NbS trainer is required to perform all listed tasks and to submit the following products to IUCN:
